

Monthly Georgetown Home Maintenance Reminder

Georgetown Home Services · georgetownhomeservices.com

Every month (about 30 minutes)

- HVAC: Check filter; replace or clean if dirty. Note any new noise or odors when the system runs.
- Plumbing: Run water in rarely used sinks/tubs to keep traps full; look under sinks for moisture or stains.
- Safety: Test GFCI outlets in kitchens, baths, garage, and exterior; reset if needed.
- Exterior: Walk the property—grading toward foundation, sprinkler spray on siding, pest entry gaps.

Quarterly add-ons

- Vacuum refrigerator coils if accessible; confirm door seals close firmly.
- Check water heater area for corrosion, moisture, or error codes on the unit.
- Review fire extinguisher pressure gauge and expiration date.

When something seems off

- Write down dates, symptoms, and photos—helps when you compare quotes.
- Use written scopes from multiple providers before large repairs or replacements.
- Confirm licensing and insurance directly with the company for your trade and project.

This checklist is for planning only—not a substitute for licensed inspections or professional service.
